

## Leaming Lane Burton on Lonsdale

# Case Study

The attractive front of this traditional stone property at Burton in Lonsdale in the North Yorkshire Dales has been terraced in a 'Courtyard Garden' style using random riven slabs of Black Limestone by local hard landscaping specialists, Stone Garden Landscapes. As well as aesthetics, this was also for practical reasons to allow the owners access all year round with plenty of space for container gardening. Stone Garden Landscapes used **vdw 840plus** in the 'Natural' colour shade as it gave an attractive contrasting colour to the jointing, but primarily because it could be quickly and easily applied without waiting for a completely dry weather forecast. This is because the paving surface is actually thoroughly pre-wetted before applying this advanced paving grout.

**Vdw 840plus** is an advanced, one-component, polymeric sand based jointing mortar for use in domestic, non-vehicle trafficked areas. It is slurry applied by squeegee using more water and so it effectively self-compacts into the joints; after a few minutes drying any excess is brushed off and the surface is given a final rinse clean.

### Patios and Pathways

**Client:**

Private Residence

**Paving Contractor:**

Stone Garden Landscape Limited

**GftK Products Used:**

vdw 840plus Natural
