## Case Study

This substantial new build property in Formby was built for a private client that wanted an attractive hard landscaping all around the house that enabled multiple vehicle access to the whole of the front, plus extensive alfresco dining and entertaining areas to the rear.

The front driveway areas were designed in grey granite setts, with features inserted red and lighter grey granite and this was all grouted with **vdw 800 Grey**, an epoxy bound jointing mortar that is suitable for small format paving in all types of trafficked areas from driveways to High Streets.

The large format stone slabs to the rear were all grouted with **vdw 840plus Grey**, a one-component, polymeric sand mortar that is ideal for patios, terraces and pathways in domestic pedestrian areas.

A big plus for these **GftK Paving Jointing Mortars** in the UK is that there is no need to wait for a dry weather forecast, because they are slurry applied on pre-wetted paving surfaces, then they self-compact into the joints and finally the surface is brushed off and then rinsed again.
